GLASS FLOOR TILES (98% RECYCLED)
PRIOR TO INSTALLATION
The surface where the product is going to be installed must be clean and level. We strongly recommend dry laying prior to installation. Blending of the tiles is key to insuring a pleasing overall look to your room. This will resolve any color or size issues prior to installation and will serve as a review of tile placement. Installation should be carried out by experienced personnel.

SETTING MATERIALS
For Porcelain tiles, install with any high-quality adhesive recommended for porcelain tiles. This must also be suitable for the environment they will have to withstand. Fitting with traditional mortars does not ensure good adhesion.

For Glass tiles, install with any high-quality adhesives recommended for glass floor tiles. This must also be suitable for the environment they will have to withstand. Fitting with traditional mortars does not ensure good adhesion.

For Mud Installations, all setting materials and installation methods should be performed using the prevailing guidelines set by the Tile Council of America and the ANSI Specifications.

GROUT & JOINTS
For Porcelain Tiles, we recommend using a minimum of 5/32-inch (0.08” or 2 mm) spacers for a perfect alignment of the tiles. It will also be necessary to make small adjustments by hand to compensate for the natural dimensional variations of the tiles. The joints should be filled with appropriate materials according to the specifications given by the joint-filling material manufacturer. We do not recommend the installation of porcelain tiles without joints.

METHOD
Follow the appropriate standard for porcelain and glass tile installations as provided by the TCNA (Tile Council of North America Handbook) and the ANSI (American National Standards Institute) specifications.

MAINTENANCE
Clean the tile regularly with a non-abrasive/non-acidic, mild and pH neutral cleaner. We recommend FILA CLEANER -Neutral Cleaner (Available in our Price List) for all cleaning purposes of our tile. Use products which are suitable to eliminate the remains of mortar, cement, etc. Never use an acids cleaning agent on newly installed flooring because the acid reacts with the unset cement and can damage the seals, or insoluble compounds can be deposited on the surface of the paving. Do not use metal scrapers or abrasive pads.

Daily cleaning, after use, will be made particularly easy as it only requires clean water and a very well-wrung cloth. In areas where the tile could be especially money (kitchens), a detergent with bleach or ammonia can be added to water, although in this case we always recommend giving a final rinse with clear water. Do not use waxes, oils or similar products. In some cases, we see that the installation of the product can lead to the situation of having to clean very dry and specific stains, which cannot be removed with a damp cloth but that will disappear if we apply concentrated bleach (the one for floors, not the one used for clothes) and leave it to dry. For especially resistant stains it may be necessary to repeat the process.

PLEASE NOTE:
Due to the nature of our tile, a certain amount of variation in color, shading, surface and texture are to be expected. Use of the tile constitutes acceptance. We assume no responsibility for installation.

The installation information provided is to be used as a guideline only and should be discussed with a professional and accredited tile installer.
