CEMENT TILE INSTALLATION GUIDE

- Cement Tiles must be installed on a level, clean, dry surface. Humid subsoil can cause deposits on the surface of the tiles.
- Do not let the boxes get wet. You should store the material in a dry area. Moisture can cause staining on the surface of the tiles.
- Cement Tiles are products of natural materials, therefore slight tonal variations may be present from tile to tile. It may be necessary to vary tiles during installation in order to disperse the slight variations.
- If the tiles are to be laid on a concrete slab, ensure the slab is completely cured to prevent white efflorescence spots from appearing later on the surface as water evaporates through it.
- Adhesive must be applied evenly on the floor or wall surface evenly and thoroughly using a large toothed trowel.
- Adhesive must also be applied evenly on the back of each tile.
- Lay the tiles without hammering, leveling them using hand pressure. If you choose to install with space, leave a thin gap – joint of 1/16” thickness between the tiles for grouting.
- Cement Tiles must only be cut with wet saw.
- Installed tiles should be left to dry for 48 hours before sealing.
- After installation, wash floor with a neutral detergent. Any extra residue or mortar should be removed immediately. Do not allow water or other liquids to spot, pond, or ring on the surface of smooth tiles. Do not leave spillages, drips, wet buckets, cups, footmarks, etc. on the surface at any time prior to sealing.
- Cement Tiles are not pre-sealed at the factory. Therefore, sealing with a penetrating sealer is necessary after the installed material is dry. Make sure to seal with an impregnating or penetrating sealer after cleaning and before grouting. Allow two to three days for sealer to cure. This acts as a grout release to prevent the tiles from getting stained by grout.
- **DO NOT USE DARK COLOR GROUT as joint filler, dark color pigments have been proven to stain tiles.** Use only unsanded grout for joints. For dark color grout ONLY use Mapei Flexcolor CQ.
- Fill the joints between the tiles using a fine plastic scraper without spreading the grout on tiles. Use a rubber grout float for clean spreading.
- Any extra grout must be cleaned immediately with a wet sponge.
- It is recommended to seal once more after grouting. Make sure all excess sealer is wiped off before the second coat of sealer.
- Never use acidic or alkaline cleaners. Use only PH neutral mild soap or dish soap.
- Architectural Ceramics will not be held responsible for improper installation of your cement tiles or specific jobsite conditions. Please consult with a professional contractor who is familiar with installing cement tiles.
